

## ⚡ What To Do If Your RCD Keeps Tripping

If your electrics have suddenly gone off, it can be worrying — but in many cases, it's something simple you can safely check yourself before calling an electrician.

This guide will help you identify whether the issue is likely to be an appliance or something more serious.

## 🔍 What is an RCD?

An RCD (Residual Current Device) is a safety device in your fuse box that switches off your electrics if it detects a fault.

It's there to protect you from electric shock — so if it trips, it's doing its job.

## ✂ Step-by-Step: What You Should Do

### 1. Turn Off & Unplug Everything You Can

Go around your home and unplug all appliances

This includes kettles, toasters, washing machines, TVs, extension leads — everything you can access
